

Scheduled commencement of the full operation of pipelines between Shizuoka and Hamamatsu, “Shizuhama Trunkline”

Shizuoka Gas Company, Ltd. and Chubu Gas Company Ltd. have jointly been constructing the natural gas pipelines, Shizuhama Trunkline, since November, 2009, which extend from Shizuoka City to Hamamatsu City in Shizuoka Prefecture. We announce that Shizuhama Trunkline is now scheduled to commence its full operation in the second half of 2015.

The partial operation of Shizuhama Trunkline, between Shizuoka City and Kakegawa City (approx. 70km), was commenced in January, 2014. While other sections of pipelines, being not operational, are intensively under construction with revised construction works in certain areas, the full operation of Shizuhama Trunkline is now scheduled to be commenced in the second half of 2015.

We are continuously committed to safe and reliable construction work toward the full operation of Shizuhama Trunkline.

[Outline of the construction of Shizuhama Trunkline]

1.	Location:	between Shimizu LNG Sodeshi Terminal (Shimizu-ku, Shizuoka City) and South supply station of Chubu Gas (Minami-ku, Hamamatsu City)
2.	Design:	Design pressure; about 7MPa Diameter; 400 mm - 500 mm
3.	Total Length:	Approx. 108 km
